
Base station power supply maintenance basics

What is power station maintenance?

Power station maintenance refers to the regular activities and strategies implemented to ensure the optimal performance, reliability, and safety of power generation equipment and systems. Q: Why is maintenance important for power stations?

How much power does a base station need?

There is no general maximum output power requirement for base stations. As mentioned in the discussion of base-station classes above, there is, however, a maximum power limit of 24 dBm output power for Local Area base stations and of 20 dBm for Home base stations, counting the power over all antennas.

How to ensure effective maintenance of power stations?

To ensure effective maintenance of power stations, following best practices is crucial: Comprehensive Maintenance Plan: Develop a well-defined maintenance plan that includes preventive, predictive, and corrective maintenance activities.

What maintenance activities can be performed while a power station is in operation?

Certain maintenance activities can be performed while the power station is in operation, especially those involving condition monitoring, routine inspections, and minor repairs. However, major overhauls or repairs may require planned outages or shutdowns to ensure the safety of personnel and uninterrupted power supply.
