# Build your own solar power system

How do I build a DIY solar system?

If you're wanting to build a DIY solar system it is critical that you understand the basic laws that govern how electricity works. Understanding basic electrical concepts such as voltage, current, resistance, Ohm's law, and circuit theory are all necessary for a successful DIY solar build. We will begin by defining electricity.

Can you build your own Solar System?

Well, you can always build your own at home. No, it won't orbit the earth like NASA's satellites, but it has a camera that can transmit real-time video and audio for up to 300 feet. You can launch it and have it orbit around your home. The best part? It's eco-friendly and relies on garden variety solar panels to recharge.

Are DIY solar panels a good idea?

In today's environmentally conscious world, more and more homeowners are turning to renewable energy sources to power their homes while reducing their carbon footprint. DIY solar panel kits have emerged as an accessible and cost-effective way for homeowners to embrace solar power.
