## Cambodia exports energy storage products

How has the energy supply in Cambodia changed over the years?

Total primary energy supply (TPES) increased by 5.8% per year in 2000-2010 and by 8.0% per year in 2010-2019, showing the same trend as that of TFEC. Due to the significant increase in electricity demand, Cambodia rapidly increased its hydropower and coal power generation in 2010-2019.

How is energy used in Cambodia?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

What are Cambodia's most valuable export goods?

The above information is presented at the two-digit Harmonized Tariff System (HTS) code level. Drilling down from the more granular four-digit HTS code perspective, cases, handbags and wallets represent Cambodia's most valuable exported good generating 7.3% of total Cambodian export sales.

What are the main sources of electricity in Cambodia?

Major sources of local power generation are hydro and coal, and minor sources include diesel, wood, and biomass. In addition to local power generation, Cambodia also buys electricity from neighboring countries, especially during the dry season.

That dollar metric exceeds the average \$1,400 per capita one year earlier during 2023. Cambodia's Top 10 Exports The following export product groups represent the highest dollar ...
