# Corrosion-resistant alternatives for mobile energy storage containers in China and Europe

Why is corrosion resistance important for macro packaging?

For macro packaging, ensuring the corrosion resistance of packaging materials in the TES system has become its main problem, because it is not only related to the safety of food in the transportation process but also related to the long-term use and complete function of the entire energy storage system , .

What is corrosion inhibitor technology?

The corrosion inhibitor molecules are adsorbed on the surface of the container to form a protective layer, which greatly reduces the corrosion rate of the container in an acidic environment. At present, corrosion inhibitor technology is also developing in the field of energy storage.

Which energy storage and conversion devices are most promising?

Electrochemical energy storage and conversion (EESC) devices, including fuel cells, batteries and supercapacitors (Figure 1), are most promising for various applications, including electric/hybrid vehicles, portable electronics, and space/stationary power stations.

What is energy storage container?

Energy Storage Container is an energy storage battery system, which includes a monitoring system, battery management unit, particular fire protection system, special air conditioner, energy storage converter, and isolation transformer developed for the needs of the mobile energy storage market.
