## Do solar panels need to be drilled on the roof

Is a roof necessary for solar panels?

Yes, a roof is necessary for solar panels, as they need a sturdy surface to be installed on. While some homeowners choose to install solar panels on the ground or on carports, the majority of solar panels are installed on the roof.

Can you install solar panels on an old roof?

An old roof may not support the installation of solar panels due to its age. Installing racking or carrying heavy solar panels can damage an old roof that is not built to handle the weight. Before contacting a solar installation team for a quote, determine the age of your roof.

Can solar panels be installed on a tile roof?

Asphalt shingle also known as composite roofs are very common and are easy to install solar panels on to. Typically, a solar installer will drill straight into the roof and attach the mounts for the solar panels to be placed on. Installing solar panels on to a tile roof will usually require the solar installer to remove and replace some tiles.

Can solar panels be installed on a damaged roof?

Solar panels are not installed on old or damaged roofs -- or, at least, they shouldn't be! The typical life span of a roof is around 25 years, which is also the life span of an average solar panel. Therefore, if your roof is over a decade old, it's probably going to start breaking down 10 years before your solar panels are ready for replacement.
