# Dual DC Uninterruptible Power Supply

What is a dual output DC uninterrupted power supply (UPS)?

A dual output DC uninterrupted power supply (UPS) provides supply and backup to two different dc loads in an event of power outage. This is quite different from the conventional UPS which provides AC outputs. Using the required circuit components with the right method of analysis, this device is able to produce 5VDC and 19VDC outputs respectively.

What is an uninterrupted power supply (UPS)?

Uninterrupted power supply (UPS) provides short-term power back-up to sensitive electronic and electrical equipment, where unexpected power outages could lead to undesirable outcome. The UPS usually serves as a bridge between connected equipment, the utility mains power and other long term back-up power systems like generators.

What kind of battery does a DC UPS use?

Our DC UPS systems for 12V /24V /48V provide an uninterruptible power supply and ensure fail-safe availability of process-critical systems and components. Maintenance-free supercaps, long-life and safe LiFePO4 and lithium-ion battery packs, or classic lead-acid batteries are used.

Which batteries are used in a decentralised UPS system?

Maintenance-free supercaps, long-life and safe LiFePO4 and lithium-ion battery packs, or classic lead-acid batteries are used. Our decentralised UPS systems provide effective protection against power failure, flicker, fluctuation, or voltage dips in DC power supplies.

Mylion MU248 Mini UPS is an Uninterruptible Power Supply which can be used as a standby energy back-up to power 24V and 48V devices at the same time during a power outage. Max ...

A dual output DC uninterrupted power supply (UPS) provides supply and backup to two different dc loads in an event of power outage. This is quite different from the ...

In modern industrial automation and process control systems, ensuring uninterrupted power supply is critical, especially for sensitive instrumentation such as Distributed Control ...

The DC UPS ensures superior system availability with the uninterruptible power supply. The DC UPS continues to supply your application reliably even if the supply network fails. This ...

Description The TIDA-00711 design is a compact, low-cost, high-efficiency, dual output, 50-W, isolated DC-DC converter solution designed for use in uninterruptible power ...

In today's digital landscape, maintaining uninterrupted power supply is crucial for ensuring the continuous operation of servers and critical equipment. One of the most effective ...
