What is a tie breaker?

A tie breaker is a type of circuit breaker that connects two sections of an electrical bus serving different power sources. They are commonly used to connect electrical systems to power sources and load circuits, as well as to protect people and equipment from overcurrents. In the context of maintenance, tie breakers offer significant advantages.

What is a bus tie breaker controller?

The controller is designed to be part of a DEIF power management system which ensures that all breaker operations are carried out in a fast, efficient, and safe manner: Before closing the bus tie breaker, the power management system synchronises the busbar sections, and before opening the bus tie breaker, the system de-loads the bus tie breaker.
