What is a network-side filtering reactor?

They are used to filter the high-frequency ripple caused by the inverter's PWM, smoothing the voltage wave at its output. We manufacture a wide range of network-side filtering reactors designed to filter the high-frequency ripple caused by the inverter's PWM, smoothing the voltage wave at its output. What benefits do our reactors offer?

How to measure high voltage and large current in a reactor?

ould be used appropriately. Measurement of high voltage and large current As reactors in the fields of power systems and power electronics are high in voltage and large in current, a power analyzer, probe and current sensor with a bandwidth and input range that can accept input of the voltage and current to be measured, and connect

What is insertion of AC reactor in a power converter?

ed in the input or output side of a power converter such as an inverter. Insertion of an AC reactor in the input side is effective in protecting against inrush current into the inverter and insertion in the output side suppresses distortion and harmonics contained in AC signals. Suppressing the harmonics of currents ca

What is a single phase DC reactor?

The single-phase DC reactor is mainly used between the DC link and the inverter link of the frequency conversion system. The main purpose is to limit the AC component superimposed on the DC current to a certain value.

Product Applications High-frequency reactor is widely used in High-frequency inverter circuit, high-frequency voltage rises and Step-down Circuit, etc.
