
How big an inverter should I choose for 72V

Do I need an inverter size chart?

The need for an inverter size chart first became apparent when researching our DIY solar generator build. Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly.

How big should a solar inverter be?

To account for power losses assume an 80 percent efficiency. Your solar inverter should have a similar or slightly higher wattage rating than the DC output of your solar panels (which in this case is 4.5 kW). You can size it between 1.15 and 1.5 times larger. The rule of thumb is to size your inverter 1.25 bigger than your solar array.

How do I choose a solar inverter?

Knowing your array size allows you to choose an inverter that can handle that production efficiently--without over- or under-investing in capacity. The second step is understanding your system's DC-to-AC ratio, one of the most important metrics when sizing a solar inverter.

Should your inverter size match your home's energy usage?

Think of inverter sizing like choosing the right-sized engine for your car. Too small, and you'll struggle on hills. Too large, and you're paying for power you'll never use. The sweet spot maximizes both performance and value. It's a common misconception that inverter size should match your home's energy usage.
