# How many companies are there in North Korea to build power stations

How many power plants does North Korea have?

North Korea has 30 utility-scale power plants in operation, with a total capacity of 8808.0 MW. This data is a derivative set of data gathered by source mentioned below. Global Energy Observatory/Google/KTH Royal Institute of Technology in Stockholm/Enipedia/World Resources Institute/database.earth

How does North Korea generate electricity?

Today, the construction of smaller-scale hydropower stations is the main focus of North Korea's electric generation sector, and numerous projects are taking place across the country. Based on state media reporting, the power being generated is largely used in the region around each power station, helping to even out national power differences.

Does North Korea have a thermal power station?

While North Korea's thermal power stations continue to play an important role in the state's energy mix, the stations were built decades ago in collaboration with engineers from the former Soviet Union and China. The outdated technology makes them inefficient, and thermal capacity has not risen significantly in decades.

Does North Korea have a power shortage?

Preface North Korea suffers from chronic energy shortages. Rolling blackouts are common, even in the nation's capital, while some of the poorest citizens receive state-provided electricity only once a year.
