
Latest developments in Syria energy storage projects

How much does it cost to repair a power plant in Syria?

The Syrian Ministry of Energy estimates that the cost of repairs alone could run to \$5.5 billion- a figure that does not include restoring sections of destroyed infrastructure. Key power plants in Mahardah, Aleppo, and Zayzoun have been destroyed, and 40% of the country's transmission lines have also been damaged.

What happened to power plants in Syria?

Key power plants in Mahardah, Aleppo, and Zayzoun have been destroyed, and 40% of the country's transmission lines have also been damaged. Existing infrastructure is also suffering from widespread looting of valuable electrical cables.

What is the best way forward for Syria's energy sector?

He believes that the best way forward for Syria's energy sector lies in accelerating the adoption of renewable energy sources, due to the long-term economic and environmental advantages of renewable sources, including "energy independence, job creation, and reduced operational costs."

How can the Syrian government improve the electricity system?

Beyond just securing high-profile investments, the Syrian government must be able to repair and modernise the key transmission lines that crisscross the country, whilst ensuring that they stay free from looting and people siphoning electricity illegally off the grid.
