
Latvian solar glass greenhouse custom-made factory

What is a greenhouse?

A growing environment designed specifically for you. A greenhouse is an aluminum-framed structure, glazed with glass or polycarbonate, that is used to propagate and/or grow plants. Solar Innovations® designs and manufactures custom greenhouses to each customer's exacting specifications, no matter the size or purpose.

What is a commercial greenhouse?

Commercial greenhouses are built tough to withstand the day-to-day use of floral shops, garden centers and other companies that require an optimal growing environment in any season. They are typically designed with thermally-enhanced framing and utilize insulated low-E glazing that assists in regulating temperatures and light transmission.

What is a hobby greenhouse?

Designed for the casual gardener, they can be equipped with benches, shelves and even a simple irrigation system. To increase air circulation, hobby greenhouses can incorporate venting windows and/or ridge and eave vents and include a terrace door that perfectly matches the framing, both in color and style.

How many Gigant greenhouse models are there?

There are 2 models to choose from, the Gigant Hobby in standard silver aluminium finish or the Gigant Victorian, with its traditional greenhouse roof crestings and a choice of green or black powder-coated frame. Both models are fully customisable by adding additional doors and custom sizes are available upon request.

Glass greenhouses are manufactured specifically for each specific situation. Therefore, we first negotiate with the grower to find the most appropriate solutions and then we can create an offer.
