
Off-grid photovoltaic containerized photovoltaic systems for islands in the Middle East

Is hybridizing diesel-based power supply generation a viable solution for off-grid electrification?

The project demonstrated that hybridizing diesel-based power supply generation in small islands in the Philippines is a viable solution for off-grid electrification. With the Philippines having 7,641 islands, numerous smaller islands are beyond the reach of electricity grids. The project yielded multiple benefits.

How many kilowatts does a Malalison island solar power plant produce?

The Malalison Island solar photovoltaic hybrid power plant consists of a 50-kilowatt photovoltaic system with 273-kilowatt-hour lithium-ion batteries and a 54-kilowatt diesel back-up generator designed to produce 200 kilowattpower, around the clock. What issues will a photovoltaic system be focusing on?

The issues that will be focused on with regard to off-grid and edge-of-grid photovoltaic system will centre on: Security: A system that is sustainability affordable and provides an uninterrupted supply of energy which adequately meets the associated demand.

Is the private sector interested in off-grid electrification?

While the country's electrification status reached 91.1% as of June 2023, around 6.13 million households remain unserved, of which 1.29 million are in off-grid areas. The Malalison project affirms that there is private sector interest in off-grid electrification.
