# Polish solar container communication station inverter hybrid power supply

What is a hybrid solar system?

The hybrid installation includes photovoltaic panels, an energy accumulator, and a hybrid inverter. Photovoltaic panels by SUNTECH with a total maximum power of 5.67 kWp, consists of 14 modules and it is an orientation on the ground.

How does a hybrid inverter work?

The task of the hybrid inverter can be to transfer electricity to devices from a photovoltaic generator, from the power grid or from an energy storage. In the event of higher output power from the generator, the inverter can transfer it to the receivers, to the grid, and load the storage as well at the same time.

Can lithium-iron-phosphate LiFePO<sub>4</sub> storage be used in a hybrid photovoltaic installation?

In this study, a hybrid photovoltaic installation was analyzed, in which a lithium-iron-phosphate LiFePO<sub>4</sub> (LFP) storage was used. These types of storage entered the market in 1996, and now they are more and more often used, compared to other technologies, due to their safety and technical advantages.

Does a hybrid energy storage system affect self-consumption ratio?

Based on the conducted literature analysis, it can be stated that there is a lack of research regarding the actual impact of implementing hybrid solutions (PV + Energy storage) on indicators such as self-consumption ratio and electricity flows to and from the power grid.
