
Portable power bank and generator

What is the difference between a power bank and power station?

A power bank is a small, portable device that's used to charge electronic products like smartphones, laptops and more. On the other hand, a power station can store huge amounts of energy to power electrical appliances like mini-fridges, microwaves and more. Can a portable power station be your home backup? The answer, surprisingly, is yes.

What is a power bank & how does it work?

A power bank is vastly different from a power station. There's a significant difference in the amount of energy they can store, the cost of owning them and the devices they can charge. A power bank is a small, portable device that's used to charge electronic products like smartphones, laptops and more.

What is the difference between a generator and a portable power station?

A portable power station is essentially a big rechargeable battery that you carry around. Deplete it, and it's useless until you can recharge. A generator, by definition, is a device that actually converts some type of energy to usable electricity in whatever circuitry you have it connected to.

What do you do with a portable power station?
