Does Portugal have a lithium extraction policy?

4. Case background: the national lithium extraction policy mix According to the U.S. Geological Survey (2022), identified lithium resources have increasing greatly in Portugal and globally in recent years, having reached 270,000 tonnes in Portugal.

Should Portugal produce battery-grade Li-compounds?

Therefore, the production of battery-grade Li-compounds in Portugal would aid the EU in lessening its dependence on external sources for this strategic metal, assisting as well in increasing the domestic supply of raw materials for battery manufacturing. Portugal has been the sole European lithium producer since 2011 (USGS 2024).

How much lithium does Portugal have?

Portugal has noteworthy lithium (Li) resources (306 thousand tonnes- kt) that should be suitably assessed to realistically support an expected expansion of known reserves (ca. 53 kt Li), as reported in several studies (e.g. Dinis and Horgan 2018; Filipe et al. 2010).

Is there a conflict over lithium mining in Portugal?

Tellingly, scholarship on opposition to lithium mining in Portugal identifies a conflict over who owns the future, local residents or an overreaching state exercising control over territory at the cost of local self-determination (Araújo et al., 2022).
