What is an uninterruptible power supply (UPS)?

An uninterruptible power supply (UPS) is an electrical device that provides emergency power to connected equipment when the main power source (typically utility power) fails. It conditions incoming power to ensure clean and uninterrupted power, protects devices from power problems and enables seamless system shutdown during complete outages.

What is a back-up power supply?

Back-up power supplies encompass various technologies designed to maintain electrical power during outages or disruptions. The fundamental operational mechanisms vary according to the type of back-up power supply in use. For example, Uninterruptible Power Supplies (UPS) convert incoming AC power to DC power.

What are the different types of back-up power systems?

Numerous studies have analyzed back-up power systems, often delineating them by type, such as uninterruptible power supplies (UPS), generators, and battery systems. Research indicates that while UPS systems provide immediate power during outages, generators may offer long-term solutions.
