# Power station generator installation

How do I install a generator?

To install a generator, work with a professional installer to locate the generator away from windows, doors and other openings to the house where exhaust gases will disperse away from the house or occupied areas. Install the generator set outdoors only. Regular oil changes are also necessary for appropriate maintenance.

How do I prepare a facility for a generator set installation?

Place in prep area to ready to be located in facility. Preparing a facility for a generator set installation has a few additional steps. Setting up generator set mounting and auxiliary systems prior to installation can save system down time. Always consult federal, state and local authorities for regulations prior to beginning site preparation.

What is a power generating station?

The simple answer is a power generating station, also known as a power plant, usually someplace far away. But the reality is much more complicated than that. Generation is only the first of many steps our power takes on its nearly instantaneous journey from production to consumption.

How are generating units selected in a power station?

Therefore, in actual practice, a number of generating units of different sizes are installed in a power station. The selection of the number and sizes of the units is decided from the annual load curve of the station. The number and size of the units are selected in such a way that they correctly fit the station load curve.
