Can I install solar panels on my roof?

Before you can begin installing solar panels on your roof, it's crucial to ensure that your roof is in good condition and suitable for solar installation. Proper preparation not only ensures a smoother installation process but also extends the lifespan of both your roof and your solar system.

How do I install a rooftop solar system?

Align the brackets at the correct angle to capture the most sunlight. Properly secured brackets are essential for a stable installation and will prolong the life of your rooftop solar system. Once the mounting system is in place, it's time to attach the solar panels. Ensure the panels are firmly secured to withstand harsh weather conditions.

What is roof-solar tilted PVC?

Roof-Solar Tilted PVC allows solar panels to be installed on the roof in such a way that the added load on the building structure is as low as possible. The pre-assembled rails with the PVC retaining strips are thermally welded to the PVC synthetic membrane. Ballasting is therefore not required.
