
Residential Uninterruptible Power Supply

What is an uninterruptible power supply (UPS)?

An uninterruptible power supply (UPS) is one of the best ways to protect sensitive electronics like desktop computers from irretrievable data loss and permanent damage. But what about everything else in your house that plugs into the wall? Read on to learn about the benefits of uninterrupted power for your home. What Is a UPS?

Do you need an uninterruptible power supply?

But precision electronics like computers, gaming consoles, Smart TVs, and external hard drives are at far greater risk of damage from power interruptions than many home appliances. An uninterruptible power supply (UPS) is one of the best ways to protect sensitive electronics like desktop computers from irretrievable data loss and permanent damage.

How does an uninterrupted power supply work?

An uninterrupted power supply works by constantly monitoring output from the alternating current (AC) outlet the UPS is plugged into and automatically switching to direct current (DC) electricity from an onboard backup battery during interruptions such as voltage drops and blackouts.

Should you buy a portable power station with ups?

Conventional home UPS units are designed for low-wattage applications, such as providing short-term backup for a desktop computer and peripherals. If you're looking to run high-wattage appliances -- or need backup times longer than a handful of minutes -- a portable power station with UPS is a much better solution.

The residential UPS power supply, or Uninterruptible Power Supply, is a critical piece of equipment designed to safeguard your home's electronic devices during power ...
