# Safety of household solar container lithium battery energy storage

Are battery energy storage systems safe?

Whether attached to solar power systems or used as a backup generator, battery energy storage systems (BESS) are growing in popularity for homeowners in numerous states. These units may provide safer, cleaner backup power during outages. Like lithium-ion batteries generally, residential BESS may catch fire or even explode.

Can residential battery energy storage systems catch fire?

Like lithium-ion batteries generally, residential BESS may catch fire or even explode. BESS operating software may be a target for cyberattacks which could, in turn, heighten property or liability risks for homeowners. Residential battery energy storage systems (BESS) can serve two overarching purposes for homeowners.

What is a residential battery energy storage system?

Residential battery energy storage systems (BESS) can serve two overarching purposes for homeowners. They can capture the energy generated by solar power systems and save it for use when the sun goes down (or when utility rates go up). 1 They can also be used as a backup generator, providing saved power during an outage. 2
