
Seoul Energy Storage Power Production

Are South Korean companies investing in energy storage systems?

Less than a decade ago, South Korean companies held over half of the global energy storage system (ESS) market with the rushed promise of helping secure a more sustainable energy future. However, a string of ESS-related fires and a lack of infrastructure had dampened investments in this market.

Why should South Korea deploy long-duration storage?

Deploying long-duration storage will allow Korea to capture surplus renewable energy during these off-peak periods and shift it to peak demand hours, reducing curtailment and maximizing asset utilization. This tender fits within South Korea's broader decarbonization roadmap.

What is the power capacity of ESS in Korea?

In Korea, the total capacity of ESSs connected to the power system reached 1.6 GW and 4.8 GWh as of 2018.45 In terms of power capacity, 40% of ESSs are used for peak load reduction, 36% in hybrid systems (i.e., a combination of RE and ESS), and about 24% for frequency control.

Does South Korea have a storage market?

Interestingly, South Korea's approach differs from some Western markets where subsidies or mandates drive storage growth. Instead, Korea is leaning into competitive contracting, using central tenders to attract cost-efficient and technically robust projects.
