
Solar electrochemical energy storage

What are electrochemical storage systems?

Electrochemical storage systems, encompassing technologies from lithium-ion batteries and flow batteries to emerging sodium-based systems, have demonstrated promising capabilities in addressing these integration challenges through their versatility and rapid response characteristics.

What is Photoelectrochemical Energy Storage (PES)?

Newly developed photoelectrochemical energy storage (PES) devices can effectively convert and store solar energy in one two-electrode battery, simplifying the configuration and decreasing the external energy loss.

Can solar energy storage be based on PES materials?

Based on PES materials, the PES devices could realize direct solar-to-electrochemical energy storage, which is fundamentally different from photo (electro)catalytic cells (solar-to-chemical energy conversion) and photovoltaic cells (solar-to-electricity energy conversion).

Why do we need solar energy conversion devices?
