# Solar panel conversion inverter

What is a solar inverter?

A solar inverter, or solar panel inverter, is a device that converts the direct current (DC) output of solar panels into alternating current (AC). Our homes and the electrical grid use AC power, so the inverter is essential for integrating solar energy into our daily use.

Do solar panels need an inverter?

Solar panels can work without an inverter if the devices they power use DC. However, to use solar-generated electricity for standard household appliances, which typically run on AC, an inverter is necessary to convert DC from the panels into usable AC. How do inverters work in a rooftop solar system?

The electricity produced by solar panels is initially a direct current (DC). Inverters change the raw DC power into AC power so your lamp can use it to light up the room. Inverters are incredibly important pieces of equipment in a rooftop solar system. There are three options available: string inverters, microinverters, and power optimizers.

Why do we need a solar inverter?

Our homes and the electrical grid use AC power, so the inverter is essential for integrating solar energy into our daily use. Without a solar inverter, the energy produced by solar panels would be largely unusable for standard appliances and electronics. [How Does a Solar Inverter Work?](#)
