
Solar panels as power generation panels

What is solar photovoltaic (PV) power generation?

Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels.

How do solar photovoltaic cells work?

Solar photovoltaic cells are grouped in panels, and panels can be grouped into arrays of different sizes to power water pumps, power individual homes, or provide utility-scale electricity generation. Source: National Renewable Energy Laboratory (copyrighted)

How do solar panels generate electricity?

Now that we know the basics of how solar panels generate electricity let's look at the factors that affect their efficiency: Sunlight Intensity: The more sunlight hits the solar panels, the more electricity they can generate. This is why solar panels are most effective in sunny locations.

What are the different types of solar energy?

Learn about the basics of solar radiation. There are two main types of solar energy technologies--photovoltaics (PV) and concentrating solar-thermal power (CSP). You're likely most familiar with PV, which is utilized in solar panels. When the sun shines onto a solar panel, energy from the sunlight is absorbed by the PV cells in the panel.
