What is solar photovoltaic (PV) power generation?

Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels.

How do solar panels create a usable electricity system?

Here's how solar arrays create a usable electricity system for your home: As we've explained, the solar cells that make up each solar panel do most of the heavy lifting. Through the photovoltaic effect, your solar panels produce a one-directional electrical current, called direct current (DC) electricity.

What are the different types of solar power generation?

Solar power generation is categorized mainly into photovoltaic and photothermal power generation. Photovoltaic power generation involves the use of solar photovoltaic cells to convert sunlight directly into electric power based on the photovoltaic effect.

What is photovoltaic power generation technology?

Photovoltaic power generation technology, on the other hand, directly converts light energy into electricity using the photovoltaic effect of semiconductors. It is suitable for powering small devices.
