## Southern rooftop solar panels

Can solar panels be placed on a south facing roof?

If a solar panel is placed on a south facing roof in the northern hemisphere, it may be shaded by a tree, reducing the sunlight it receives. However, if the east or west sides of the roof are free from shade, these locations may offer increased efficiency.

How do I know if my roof is suitable for solar?

Before installing solar panels, assess your roof to ensure it is suitable for solar installation. Start by examining the roof's condition. It should be sturdy and have at least 10-15 years to function. If the roof is damaged, consider repairing or replacing it to avoid complications later.

Can solar panels be installed on a roof?

Yes, solar panels can be installed on most roof types, including asphalt, metal and tile. However, the installation method may vary. 2.

How do you install solar panels on a metal roof?

Clamps that attach to the bolts or seams are commonly used. Following the specific guidelines provided by your racking system is necessary due to the variety of metal roof configurations available. For flat or low-slop roofs, a ballasted mount system is ideal for solar panel installation. This method doesn't involve any drilling into the roof.
