## Storm outdoor energy storage

What is energy storage?

It's a new approach that enables energy storage--once a costly, passive (but necessary) disaster recovery asset--to emerge as a cost-effective, active participant that stands to make power systems and consumer services more resilient, more efficient, and more responsive to the need for a sustainable, readily-adaptable energy environment.

Why do we need energy storage systems?

By providing power and lighting during large-scale weather events such as Superstorm Sandy and Hurricanes Irene and Katrina, energy storage systems of all shapes and sizes reduce the time it takes for first responders to begin recovery efforts.

Should energy storage be a "must-have" for disaster recovery?

Energy storage has traditionally been viewed as an expensive "must-have" for disaster recovery efforts. While recent events support the importance of grid modernization through energy storage systems--the idea that these systems could be used to generate revenue streams and reduce operating costs is a newer concept.

Are energy storage systems a good choice for your business?

Retail customers, including large pharmaceuticals, manufacturing plants, and office complexes, are turning to energy storage systems as a cleaner, more cost effective way to manage their peak demand and peak energy charges.
