# The development prospects of zinc-bromine flow batteries

Are zinc-bromine flow batteries suitable for large-scale energy storage?

Zinc-bromine flow batteries (ZBFs) offer great potential for large-scale energy storage owing to the inherent high energy density and low cost. However, practical applications of this technology are hindered by low power density and short cycle life, mainly due to large polarization and non-uniform zinc deposition.

Are aqueous zinc-bromine flow batteries reversible?

Aqueous zinc-bromine flow batteries show promise for grid storage but suffer from zinc dendrite growth and hydrogen evolution reaction. Here, authors develop a reversible carbon felt electrode with Pb nanoparticles to suppress these issues, improving battery performance and cycle stability.

Are zinc-based flow batteries good for distributed energy storage?

Among the above-mentioned flow batteries, the zinc-based flow batteries that leverage the plating-stripping process of the zinc redox couples in the anode are very promising for distributed energy storage because of their attractive features of high safety, high energy density, and low cost.

Are aqueous zinc-bromine batteries a viable solution for next-generation energy storage?

Aqueous zinc-bromine batteries (ZBBs) have attracted considerable interest as a viable solution for next-generation energy storage, due to their high theoretical energy density, material abundance, and inherent safety. In contrast to conventional aqueous batteries constrained by sluggish ion diffusion through

**Keywords:** energy storage, flow battery, functional materials Zinc-bromine flow batteries are a type of rechargeable battery that uses zinc and bromine in the electrolytes to ...

Zinc-bromine flow batteries (ZBFs) are efficient and sustainable medium and long-term energy storage technologies that have attracted attention owing to their high energy density, long life, ...

In this perspective, we attempt to provide a comprehensive overview of battery components, cell stacks, and demonstration systems for zinc-based flow batteries. We begin ...
