What is a containerized battery energy storage system?

Containerized Battery Energy Storage Systems, or BESS, are modular, scalable energy storage solutions that integrate batteries, PCS, BMS, EMS, and thermal management within a standard container. They store energy from renewables or the grid and discharge it when needed, enabling peak shaving, load shifting, and grid support.

Can a small business use a battery storage system?

Check out the battery storage guide for small businesses. Commercial battery storage systems can either be used on-grid or off-grid. On-grid applications offer functions such as peak demand charge reduction, renewable energy sources integration, and power backup during outages.

What is a large-scale battery storage system?

Unlike commercial systems for small and medium businesses, large-scale commercial systems usually range from 100 kW to MW-level utility projects and are engineered for higher capacities, scalability, and complex operational needs. Check out the battery storage guide for small businesses.
