
Weight of lithium iron phosphate battery for energy storage

What is lithium iron phosphate (LiFePO₄)?

Lithium Iron Phosphate (LiFePO₄) is known for its excellent thermal stability and safety, featuring a specific capacity of around 147 mAh/g. While LiFePO₄ has a lower energy density, it excels in high-power capability and durability.

What is lithium battery energy density?

Lithium battery energy density measures how much energy a battery can store relative to its weight or size. There are two main types: Gravimetric energy density (Wh/kg): Energy per kilogram of battery. Volumetric energy density (Wh/L): Energy per liter of battery volume. High gravimetric energy density = more energy with less weight.

What is a cathode in a lithium ion battery?

The cathode serves as the positive electrode of a lithium-ion battery, typically composed of transition metal oxides, including lithium cobalt oxide (LiCoO₂), lithium manganese oxide (LiMn₂O₄), or lithium iron phosphate (LiFePO₄).
