What are the mobile base station sites in Mbabane

What is a mobile phone base station?
A mobile phone base station provides coverage to a geographic area known as a "cell". Cells are aligned next to each other in a similar pattern to a honeycomb,and it is for this reason that mobile phone networks are sometimes referred to as "cellular" networks.

What is a mobile phone base station antenna?
There are mobile phone base station antennas on towers and buildings throughout Australia's populated areas. These antennas are part of the mobile phone network and they emit low level radiofrequency (RF) electromagnetic energy (EME).

What are base stations & cell towers?
These structures facilitate the transmission and reception of signals between mobile devices and the wider network,enabling voice calls,text messages,and data services. Understanding the role and technology behind base stations and cell towers is key to appreciating how mobile networks operate and evolve to meet growing demands. Base Stations

What is a base station in a cellular network?
Base Stations A base station,often housed within a cell site,is the central point in a cellular network where signals are transmitted and received from mobile devices. It consists of electronic equipment,including transceivers,antennas,and signal processors,that manage the communication within a specific geographical area or "cell."
