# What is a container base station

What is a container freight station in B2B logistics?

In B2B logistics management, the Container Freight Station (CFS) is a crucial aspect in handling exports and imports. CFS is a warehouse for the consolidation and deconsolidation of export-import operations. Do you want to learn more about a container freight station? Read this article thoroughly! What Is a Container Freight Station?

How does a container freight station work?

Operations within a Container Freight Station (CFS) can be divided into two main processes: the import process and the export process. Each phase requires careful management to ensure the efficient handling of goods. In the import process, containers arriving from abroad are unloaded and transported to the CFS.

What is the difference between container freight station & container yard?

The difference between Container Freight Station and Container Yard lies in their cargo. CFS is a special warehouse for storing LCL cargo, while CY is dedicated to full cargo, or FCL. In addition, CY does not consolidate or deconsolidate cargo like CFS because the sender and recipient are the same.
