
What is an outdoor AP base station

What are outdoor access points?

Outdoor access points (APs) are wireless networking devices designed to provide Wi-Fi coverage in outdoor environments. They are frequently utilized in industrial and corporate environments where outdoor Wi-Fi access is necessary, as well as in public spaces like parks, stadiums, campuses, and locations for outdoor events.

What is the difference between indoor and outdoor access points?

Outdoor access points are built to withstand harsh weather conditions and have higher IP ratings for water and dust resistance, whereas indoor access points are not designed for such conditions. Do I need an outdoor access point if I only want coverage for a backyard?

What is a long-range outdoor access point?

A long-range outdoor access point is a type of wireless access point that is especially designed to give long-distance Wi-Fi connectivity in outdoor locations. It is perfect for applications where users must access a wireless network from a distance, as in a big campus, park, industry, or remote places.

Should I use an outdoor access point outside?

If your backyard is exposed to rain, extreme temperatures, or dust, an outdoor access point is recommended for durability and better performance. Can I use an indoor access point outside with a weatherproof enclosure?
