
Wholesale rv circuit breaker in Atlanta

How does an RV circuit breaker work?

In an RV's electrical system, the circuit breakers act in a similar way to a stationary home's electrical system. A circuit breaker is a type of electrical switch that is automatically operated by the current. It's designed to protect the electrical circuit from damage that happens when a circuit becomes overloaded.

Where does electricity go in an RV?

When you use electricity in your RV, the first place the current goes to is the circuit breaker box. Here, it becomes divided into the different circuits that run throughout your rig. In places where only a small amount of electricity is used (for lights, alarm clocks, and other small items), 15-amp circuits are generally used.

Why does my RV breaker trip?

In other words, they act as a failsafe: they interrupt the power in case of an electrical surge. This is the main reason why they trip. If you aren't overloading your RV's electrical system and there is no appliance short circuit but a breaker trips again and again, it most likely requires replacement.

What does a circuit breaker do?

A circuit breaker is a type of electrical switch that is automatically operated by the current. It's designed to protect the electrical circuit from damage that happens when a circuit becomes overloaded. Once a fault is detected, it interrupts the electricity in the circuit.
